

Occupational Health And Safety Management Systems And Their Requirements

ISO 45001 replaced OHSAS 18001 as the occupational health and safety management system standard. This standard includes guidance and requirements for identifying health and safety hazards and developing a program to help manage hazard and risk reduction.

ISO 45001 is an internationally recognized standard. It can be applicable to any organization that wants to put a standardized occupational health and safety system into place. This will minimize the risk to employees and other parties that are involved with the company, exposed to occupational health and safety risks.

Mayo Manufacturing Management can help you to develop and implement an effective safety and health management system compliant to ISO 45001. Contact us today for more information on how we can be your partner in occupational health and safety standards.
