

Everything You Need To Know About The AS9100 Revision

Everything The AS 9100 is an internationally adopted QMS (quality management system) that has been recently updated. It's also been aligned with the ISO 9001, which has also been recently updated. All organizations that have been certified for AS9100, AS 9110, AS 9120 will need to transition to the new version of the standard by September of 2018.

This revision in the QMS allows for your organization to update your management systems in order to correspond to marketplace demands. Complying with this revision will increase focus on risk assessment, leadership roles and allow your company to become better aligned with ISO standards.

When Should You Start The Transition?

The transition should be started as soon as possible. You'll need to provide the appropriate staff with the right tools and information in order to properly revise the QMS.

How Long Are The Revisions Good For?

The AS9100 will continue to be recognized and audited for organizations up until June of 2017. After this point, the new standards will be the basis for assessment. There is a transition deadline of September 14, 2018. At that point, any old certifications will no longer be valid.
